SUMMARY

Backend Developer and Computer Science student at ESI-SBA, specializing in building reliable, well-structured web applications. Proficient in the Node.js/TypeScript ecosystem with a strong focus on clean API design, secure authentication, and scalable database architecture using PostgreSQL and Prisma.

EDUCATION

Higher Education in Computer Science

École Supérieure en Informatique de Sidi Bel Abbès (ESI-SBA) 🔗

09/2024 – Present
Sidi Bel Abbès,
Algeria.

SKILLS

Backend Development & Databases

Node.js, Express, TypeScript, PostgreSQL, Prisma, Redis, Docker, Microservices, API Gateways

PROJECTS

Wasselni 🔗

03/2026 – Present

Full-Stack North African Carpooling Platform

A localized ride-sharing platform built to solve real transportation friction in the region.

- **Backend:** Node.js, Express, TypeScript — clean REST API architecture with modular routing
- **Database:** PostgreSQL + Prisma ORM — scalable schema handling users, rides, vehicles & bookings
- **Features:** Secure JWT auth, advanced ride search & filtering, full booking flow, driver & passenger dashboards

Aegis 🔗

04/2026 – 05/2026

Custom API Gateway & Microservice Orchestrator

- **Architecture:** Designed a custom API Gateway in Node.js and TypeScript, replacing third-party tools like NGINX/Kong to demonstrate deep HTTP and middleware-layer understanding
- **Fault Tolerance:** Built a Round-Robin load balancer integrated with a custom 3-state (Closed/Open/Half-Open) Circuit Breaker that automatically reroutes traffic from failing instances and self-heals on recovery
- **Security & State:** Implemented a distributed Redis-backed rate limiter and centralized JWT middleware injecting sanitized user context into downstream services
- **Testing & CI/CD:** Achieved 100% test coverage on core logic with Jest; built a GitHub Actions pipeline that runs tests and auto-publishes Docker images to GitHub Container Registry on every merge
- **Observability:** Containerized the full 9-service architecture with Docker Compose, with UUID-based request tracing across all services via a custom logging plugin

NodeTalk 🔗

01/2026 – 02/2026

The social network for developers who read documentation

Engineered a full-stack social network tailored for developers, featuring a real-time 1:1 chat system. Architected a robust PostgreSQL database using Prisma to handle complex relational data including user interactions, dynamic feeds, and follow requests. Implemented a multi-strategy authentication pipeline supporting local credentials, guest access, and GitHub OAuth.
